### VI. Atypical presentations of mucocutaneous TB in HIV: A case series from South Africa

MC Kgokolo, MJ Mokheseng , JJ Makhubele , SC Siwele , TI Maphosa , T Kungoane

I am a dermatologist with a profound interest in paediatric dermatology, I am deeply inspired by the opportunity to combine my two passions—dermatology and working with children.

One of the most fulfilling aspects of my practice is interacting with young patients and their families. I am passionate about educating them about their skin conditions, fostering understanding, and empowering them to take an active role in their treatment plans. By building

trust and involving families in care, I strive to improve both clinical outcomes and the overall quality of life for my patients.

Looking ahead, I am eager to contribute to advancing research in paediatric dermatology, particularly in the area of atopic dermatitis. This condition, which can be particularly debilitating for children, has significant implications for quality of life—especially for patients with skin of colour, where the presentation and management often require more nuanced approaches. I aim to explore innovative strategies and interventions that address these challenges, ensuring equitable and effective care for all.

I am dedicated into making a meaningful difference in the lives of children and their families. Through compassionate care, education, and research, I am committed to advancing this field and providing the best possible outcomes for my patients.
